

Audio Matrix Switch

KSA0731

Audio (0.02 – 20 kHz)

novotronik Audio Matrix Switches are designed to route either balanced or unbalanced audio signals.

The KSA0731 provides routing of 16 audio sources to a maximum of 16 zones, and includes a wide variety of features. The Matrix Switch completely eliminates the need to constantly move around audio input and output cables.

DESCRIPTION

novotronik Audio Matrix Switches are designed to route either balanced or unbalanced audio signals.

The KSA0731 provides routing of 16 audio sources to a maximum of 16 zones, and includes a wide variety of features.

The Matrix Switch completely eliminates the need to constantly move around audio input and output cables.

Several ins and outs offer impedance switching. As a result different sources and loads can be used.

Configuration is achieved by using the internal GUI.

The KSA0731 requires 20-30VDC power to operate. The system supports comes with an Ethernet control interface, allowing setup flexibility and easy remote control. LCD and keyboard feature a local control. The device features a Push-To-Talk (PTT) function. Therefore 8 dry contacts (SPDT) are available. Each contact can be managed via LAN or manual control.

PTT – D-Sub connector

The KSA0731 was developed for mobile use in vehicles.

APPLICATIONS

- Military intercommunication in mobile platforms
- Broadcast studio signal switching
- Test laboratories
